Introduction:

Cream is a tropical preparation that is typically applied to skin. These are applied to mucus membranes like those in the rectum are often used. There are semi-solid medication formulations containing one or even more medication components dissolved or spread in an adequate base. Traditionally, this concept has been applied to semi-solids that have a comparatively smooth consistency formed whether as oil-in-water (e.g., Fluocinolone Acetonide Cream) or water-in-oil (e.g., Cold Cream) emulsions. Almonds are the mainstays in nutrition. These are loaded with vitamins, nutrients and essential fatty acids, the oil derived from small but strong almond is being used for years for healthy hair and skin. Sweet almond oil is the oil obtained from fruit of deciduous almond tree(*Prunus dulcis*). Almonds could be roasted in various ways (for example hot air vs. oil roasting, temperature differences and period) to achieve light, medium or heavy roasts based upon the color and moisture content of generated almonds. Cold-pressed almond oil is processed at a low temp with no solvents, and cold-pressed oils can be more helpful to the skin.
